Phone: (929) 259-4842
Portfolio: justinlowe.dev

I am a fullstack developer. I enjoy learning about new and exciting tools and technologies that can help increase my development workflow and productivity. I am proficient in both React, and Angular 6 as well have Node js. All of my projects have a version for each of those frameworks and backend. If you'll like to know more please get in contact with the information provided, and check out my projects on github.

TECHNOLOGIES

Languages: HTML5, CSS3, Javascript (ES6), Sql(MySql), Mongo
Frameworks: Bootstrap, React, Sass (Scss), Jasmine, Angular , Node, Express js, Mongoose, Objection js
Tools: Git, Github, Chrome Dev Tools, Command Line, Responsive Design, Gulp, RESTful APIs, AJAX, JWT, AWS

RELEVANT WORK EXPERIENCE

theinsuranceladyofatlanta.com **(Full stack developer)**
- Designed and developed Theinsuranceladyofatlanta.com
- Fully desktop and mobile responsive
- Implemented/improved front end features of web site using Angular and React
- Added NodeJs/Express API endpoints for consumption by new and updated features
- Manage and maintain hosted Mysql database hosted on AWS Rds
- Integrating RESTful APIs to perform complex queries
- Utilized 3rd Party APIs & HTML5 Browser APIs
  .

shalewevent.com **(Full stack developer)**
- Designed and developed Shalewevent.com
- Fully desktop and mobile responsive
- Implemented/improved front end features of web site using Angular and React
- Added NodeJs/Express API endpoints for consumption by new and updated features
- Manage and maintain hosted Mysql database hosted on AWS Rds
- Integrating RESTful APIs to perform complex queries
- Utilized 3rd Party APIs & HTML5 Browser APIs

HIGHLIGHTED PERSONAL PROJECTS

Polling fullstack App- **(REACT):** https://iipollreact.com/
(ANGULAR): https://iipoll.com/
- Cross Framework Application. Built in two both React and Angular.
- Implemented AWS RDS for managed Mysql instance to store application data.
- Users of this app can create polls, and vote on different users submitted polls.
- Highcharts Piechart api to display votes.

MapBox weather app -   (REACT): https://jlowe1210.github.io/weather_app_react_v2/
(ANGULAR): https://jlowe1210.github.io/angular-weather-app-v2/

- Built in two frameworks. Angular/React
- Used MapBox Api to implement a point and click feature to retrieve weather from anywhere on the world
- Implemented the use of open weather free api to find the current weather of any given location

SimpleChatApp -   (REACT): https://simplechatapp.com/react/
(ANGULAR): https://simplechatapp.com/angular/

- Built in two frameworks. Angular/React
- Implement real time features using socket io
- Implemented AWS RDS for managed Mysql instance to store application data.

Indecision App - (REACT): https://jlowe1210.github.io/Indecision-App-react-redux/
(ANGULAR): https://jlowe1210.github.io/Indecision-App-Angular/

- User can set a list of tasks and have one task be randomly generated for him/her to complete
- Implements Localstorage api
- Built in two frameworks. Angular/React

Hangman -   (REACT): https://hangmanreact.com/
(ANGULAR): https://jlowe1210.github.io/hangmanangular/

- Built in two frameworks. Angular/React
